

# THE TEN POINT AG-PILOT CHECK LIST

1. Low level operations demand pilots being focused on the job
2. Resist economic pressure
3. Watch for wires-the risk is real-interrogate clients
4. Take extra time in turns-maintain airspeed-fly the wing
5. E.Cats and senior pilots-mentor fellow pilots to maintain safety standards between annual checks
6. Download at least 25% for first load and be within standard A.U.W.
7. Don't hesitate to make the call:  
**DOWN A 100 KILOGRAMS**
8. Take responsibility for your fitness to fly. Refer CAA poster
9. Beware of GPS distraction. If sorting a GPS problem be above 500 feet or preferably on the ground
10. Constantly monitor your own and your company's agricultural flight safety culture and fly to come home.
